### Free cross-platform IDE for PHP/HTML/CSS/JavaScript development

When you start developing with PHP, you face the problem of deciding which IDE to choose. Most companies sell their IDE's for high prices (\$100-\$500). We, on the other hand, offer a multifunctional portable IDE absolutely FREE with all these standard features: PHP/HTML/CSS/JavaScript highlighting; advanced PHP/HTML/CSS/JavaScript autocomplete; a powerful PHP debugger; context and dynamic Help; a

Had the same problem, but found a better solution

12 xDebug is already in MAMP.

Check your php.ini

```
/Applications/MAMP/conf/php5.x/php.ini
```

Go all the way down. You will see

```
[xdebug]
zend_extension="/Applications/MAMP/bin/php5.X/lib/php/extensions/no-debug-non-zts-20
```

change that into

```
[xdebug]
zend_extension="/Applications/MAMP/bin/php5.X/lib/php/extensions/no-debug-non-zts-20
xdebug.remote_enable=1
xdebug.remote_host=localhost
xdebug.remote_port=9000
xdebug.remote_handler=dbgp
```

Restart server... DONE!

<http://danpolant.com/want-to-run-xdebug-mamp-is-the-easiest-way/>
