Adobe doesn't register their software handler with Windows, so you'd have to do it from this page instead:

**Control Panel > Programs > Default Programs > Associate a file type or protocol with a program**

From there, choose **.PDF** in the list (tip: click in the list then type .pdf to select-by-typing and find it quickly). With .pdf highlighted, choose Change Program and choose Adobe Reader. This should be effective globally, so even if you open a PDF file from your email, it should open with Adobe Reader.

I have both Word 2003 and 2010 installed. Why are neither showing up in the list?
