PENDING INFORMATION AND IS NOT ACTIVATED
CONNECTED TO:
rjmprogramming.com.au
STATUS:
Pending Information - Not Active!
REQUIRED:
We have received the payment of your SSL certificate for the domain (rjmprogramming.com.au), however, we are unable to verify the website and email existence. Since your website is hosted in a Self-Managed server, please provide the following: 1.) CSR file generated from your hosting provider (at least 2048 bits key), 2.) SERVER SOFTWARE used to generate the CSR, and 3.) Please confirm if "admin@rjmprogramming.com.au" is fully functional. We will be using this for the Domain Control Validation. Please send these requirements to SSL@crazydomains.com.au so we can proceed with the necessary procedure. This order will be tagged as inactive if no actions taken after 30 days.

running the domain's DNS), and then wait until the following day to make the actual IP address change.
Step #3: Generating the Certificate Signing Request (CSR)
A CSR is a digitally signed file that is used to apply for an SSL certificate from a certificate vendor. If you would like a much more technical explanation please see http://en.wikipedia.org/wiki/Certificate_signing_request.
Still in your server's WHM, find the navigation section labeled SSL/TLS and click on the link marked Generate an SSL Certificate and Signing Request as indicated below:
SSL/TLS
Generate an SSL Certificate and Signing Request
Install an SSL Certificate on a Domain
Manage SSL Hosts
Purchase and Install an SSL Certificate

Private Key Options
When the system generates a self-signed certificate and CSR, the system also generates a new private key for the certificate and CSR. To protect the certificate, this key must be confidential. Do not send the private key through an insecure method.
Key Size:
2,048 bits (Recommended)
Certificate Information
The information provided below is used to create a self-signed certificate and the corresponding certificate signing request. Since this is the information that users will see when they access a site via SSL, it is important to provide accurate and valid information.
Domains: Required
rjmprogramming.com.au
Provide the FQDNs that you wish to secure, one per line. To create and use a wildcard domain, add an asterisk to the domain name as in the following example: *.sample.com. NOTE: Many CAs charge a higher price to issue multiple-domain certificates (sometimes called "UCCs" or "SAN certificates") and certificates that include wildcard domains.
City: Required
Provide the complete name for the city or locality. Do not use abbreviations.
State: Required
Provide the complete name for the state or province. Do not use abbreviations.

Hello Robert,
Good day!
This is in connection to the call that you made earlier regarding the SSL. Please see the attached zipped certificate file that you need to upload to your server.
For further assistance and clarifications please feel free to reply to this email and we will help you with your concerns.
Regards,
Jay A
